

Food Webs: Australian Woodlands

Investigate the food chains and webs of one of Australia's most common community types.

Product Features

| | |
|---|---|
| Create Food Webs Using the 30 Organisms Available | View and Printout Seasonal or Yearly Data |
| Change Variables Including Rain and Food Supply | Edit Species Start Numbers |
| Model Food Chains Over a 25-Year Period | Save Data as Text for Later Analysis |
| Introduce New Species During Modeling | |

Grade Level

High School

Detailed Product Information:

Investigate the food chains and webs of Australia's most common community types. Easily construct hundreds of food chains and food webs using any of the 30 organisms available. Model simple food chains over a 25 year period, allowing them to investigate the effects of predator/prey relationships and/or a changing ecosystem. Investigate the influence of introduced species such as the cat, rabbit, or fox. The data can be displayed and printed using either yearly or seasonal numbers. The report option allows for direct student feedback or for teacher reports to be generated at the end of the exercise.

Advanced Web Modeling allows you to:

- Model up to 30 species for 25 years.
- Control Rainfall
- Cause drought or much needed rain
- Allow bush fires
- Introduce farming into the ecosystem
- Turn animal migration on or off
- Graph biomass and consumer levels
- View or printout seasonal or yearly data
- Save data as text for later analysis
- Change species start numbers
- Save food webs and current modeling data
- Change the web easily during modeling to allow for the introduction of Species and a changing ecosystem.

Construction of food chains and webs could not be simpler - just drag your selected organism around the screen and drop it. Predator/prey relationships require only two clicks of the right mouse to establish or delete. New features enable you to use the control key and the left mouse button.

Tangent Scientific

P.O. Box 705, Lewiston, NY 14092 • phone 1-800-363-2908 • fax 1-877-704-1555
